| Tremblay | Daniel | 2025-02-22 17:00:00.000 |

Explanation:

This query retrieves the names and admission dates of patients classified as high-priority emergency patients during triage. It joins the **Admissions**, **Patients**, and **TriageAssessments** tables. It associates each patient with their admission and triage assessment. The WHERE filters **emergency** admissions with a **High** priority. **DISTINCT** prevents duplicate results.

# Query 2

```
--query 2
SELECT DISTINCT p.patient_id, p.last_name, p.first_name, COUNT(*)
FROM Admissions a
JOIN Patients p on p.patient_id = a.patient_id
GROUP BY p.patient_id, p.last_name, p.first_name
HAVING COUNT(*) >3;
```

patients 1

SELECT DISTINCT p.patient_id, p.last_na | Enter a SQL expression to filter results (use Ctrl+Space)

Grid

Text

| patient_id | last_name | first_name | count |
|---|---|---|---|
| 1 | Tremblay | Daniel | 5 |
| 2 | Bennett | Amira | 4 |

Explanation:

This query retrieves patients who have **had more than three hospital admissions**. It **joins** the **Admissions** and **Patients** tables using **patient_id**, then **groups the records** by patient to count their **total admissions**. The **HAVING** clause filters for patients with **more than three** admissions.

# Query 3

```sql
--query 3
SELECT p.last_name, p.first_name, a.admission_datetime, a.discharge_datetime
FROM Admissions a
JOIN Patients p ON p.patient_id = a.patient_id
WHERE a.final_status = 'Discharged'
    AND NOT EXISTS (
        SELECT 1
        FROM SurgicalProcedures s
        WHERE s.admission_id = a.admission_id
    );
```

Explanation:

This query retrieves the **names**, **admission dates**, and **discharge dates** of patients who were **discharged without undergoing surgery**. It **joins** the **Admissions** and **Patients** tables to retrieve patient information. It filters for **admissions** with a **final status** of '**Discharged**'. The NOT EXISTS excludes admissions that have a corresponding record in the SurgicalProcedures table.

# Query 4

```sql
--query 4
SELECT DISTINCT p.patient_id, p.last_name, p.first_name
FROM Admissions a
JOIN Patients p ON p.patient_id = a.patient_id
WHERE EXISTS (
        SELECT 1
        FROM SurgicalProcedures s
        WHERE s.admission_id = a.admission_id
    )
    AND EXISTS (
        SELECT 1
        FROM RadiologyExaminations re
        WHERE re.admission_id = a.admission_id
            AND re.exam_status = 'Completed'
    );
```

patients 1

SELECT DISTINCT p.patient_id, p.last_na | Enter a SQL expression to filter results (use Ctrl+Space

Grid | Text

| patient_id | last_name | first_name |
|---|---|---|
| 1 | Tremblay | Daniel |
| 2 | Bennett | Amira |
| 3 | Mercier | Julien |
| 8 | Roy | Camille |
| 9 | Khan | Omar |
| 15 | Martin | Lucas |
| 16 | Gagnon | Ines |
| 21 | Lavoie | Felix |

Explanation:

This query retrieves patients who **underwent both a surgical procedure** and a completed **radiology examination** during the **same** hospital **admission**. It **joins** the **Admissions** and **Patients** tables to retrieve patient information. It uses **two EXISTS** to verify that **both procedures** occurred during the **same admission**. **DISTINCT prevents duplicate patient** records.
